

A sustainable and profitable ecosystem

BIANNA

At Bianna, we recognise the importance of offering our clients a comprehensive, end-to-end solution that goes beyond simply providing technology; it covers the entire lifecycle of the solution and extends its value.

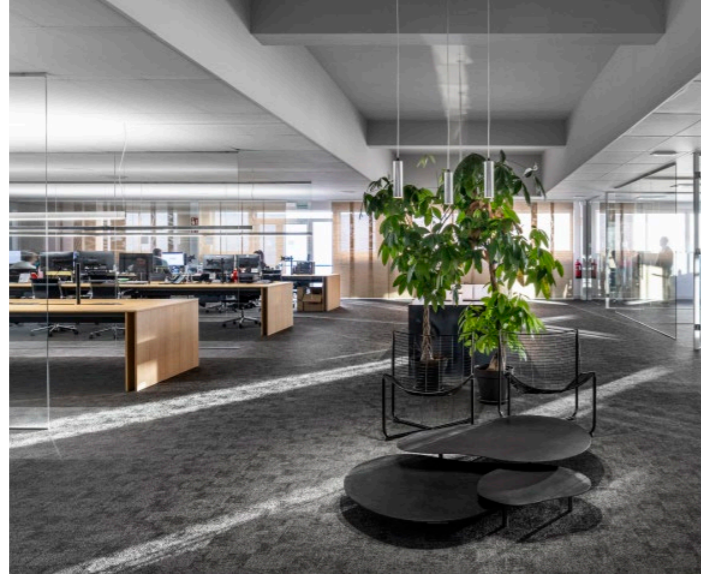

We cater both to specialist waste management operators seeking reliability and to industry seeking to decarbonise its processes and optimise energy management, turning a cost into a revenue stream.

To achieve this, we have developed a comprehensive ecosystem that is unique in the sector. Our service divisions: BRS, BGW and BAS, form the infrastructure that integrates solutions in a comprehensive and sustainable manner.

Together, they enhance the group's entire technology portfolio, including our TMB and TVS plants and equipment.

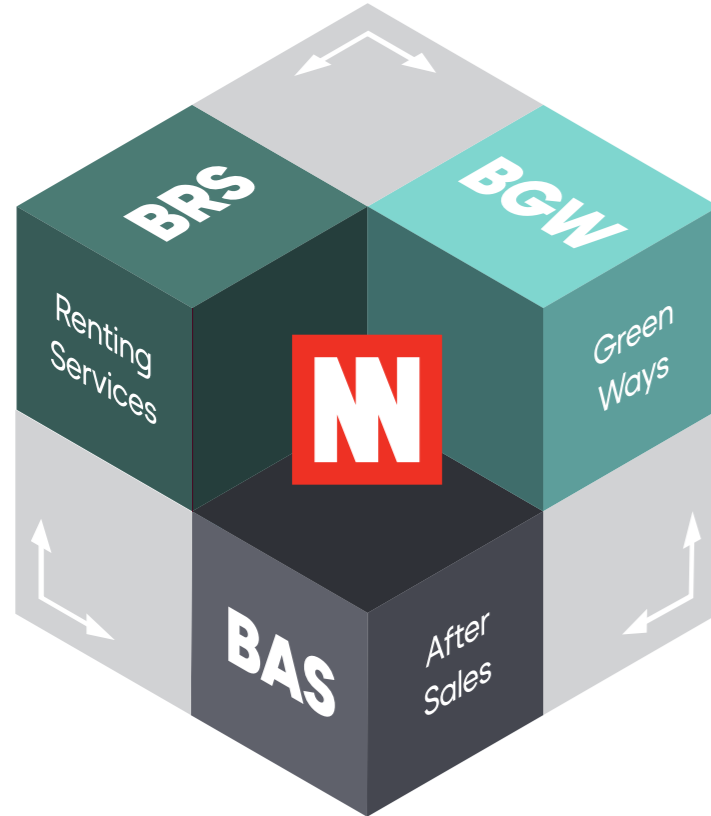

We align our interests with the performance of our clients' facilities, providing cross-cutting solutions for financing, training and maintenance.

This is how we make our technology even better:

Bianna Renting Services: Financial flexibility associated with OPEX

Tailored payment models and operational leases, removing CAPEX barriers and unlocking strategic opportunities in markets characterised by high demand for liquidity and significant technological risk.

Bianna Green Ways Test centres and technological validation

We have operational facilities that serve as commercial showrooms and advanced training centres, enabling customers and our own teams to test technologies in real-world conditions.

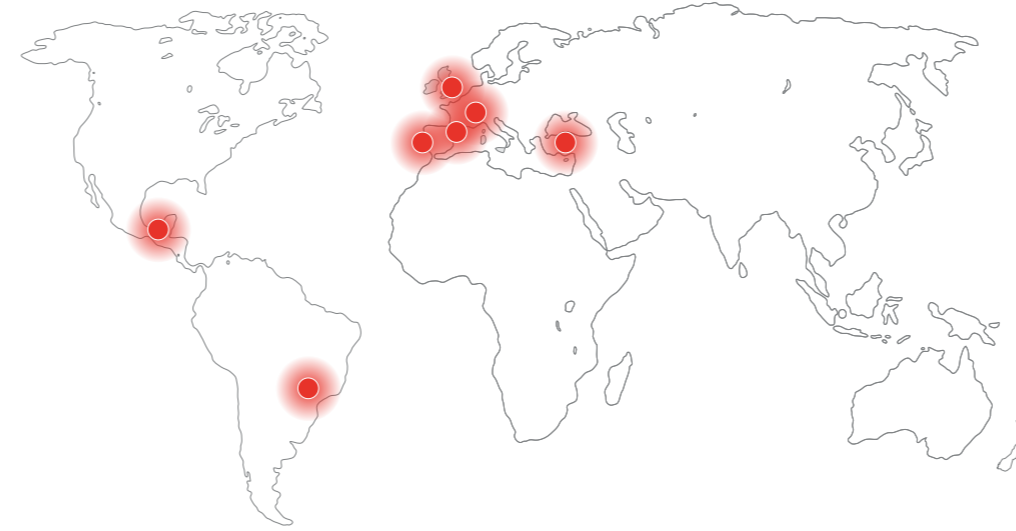

Bianna After Sales Guarantee of availability and recurrence

We transform technical support into a high-value solutions division through maintenance contracts, critical spare parts management and after-sales support for TMB + TVS equipment and plants.

Global reach and infrastructure:

Headquartered in Girona (Spain) and with an international presence, Bianna has six sites and over 86,500 m² of in-house production capacity spread across facilities in Spain, Turkey and Brazil, and operates in more than 30 countries.

At Bianna, we are a leading multinational specialising in the engineering, design, manufacture and financing of advanced technological solutions for the management, treatment and recovery of waste.

With over 40 years of experience and more than 1,100 projects and client references worldwide, we transform waste from an environmental liability into an economic asset. Our commitment is to promote the circular economy and lead the decarbonisation of strategic sectors, demonstrating that sustainable waste management will be profitable or it will not be at all.

Comprehensive technology provider:
The company offers turnkey solutions that integrate 360° solutions with our key technologies:

Mechanical and Biological Treatments
MBT

Equipment and plants for material recovery

Thermo Value Solutions
TVS

Thermal processes, encompassing combustion, drying and energy recovery

Bianna Renting Services
BRS

Financial flexibility tied with your operations

Bianna Green Ways
BGW

The place where Bianna technologies come to life

Bianna Aftersales
BAS

Comprehensive solutions for optimal operational efficiency

Service ecosystem:
We have designed a comprehensive service ecosystem around our technology, designed exclusively to maximise the return on your investment, facilitate the viability of your projects and ensure your peace of mind in the long term.

Our technology creates real value, reducing our environmental impact and ensuring the sustainability of the planet and its people, both within and outside Bianna.

AFTERSALES

We support our customers throughout the entire lifecycle of the technology

At Bianna, we recognise the importance of offering a comprehensive and complete solution to our customers, one that goes beyond simply delivering machinery. Bianna After-Sales is founded on a commitment to building a long-term relationship based on trust, offering a comprehensive service in order to ensure the continuity of your business.

Operational efficiency, performance and cost-effectiveness for your facilities

In a complex and demanding industrial environment, Bianna After-Sales acts as a guarantor of stability, offering services ranging from expert advice to rapid response to incidents.

Our services:

We offer a comprehensive range of after-sales services designed to suit the operational requirements of each facility:

Technical Support Service (SAT)

Maintenance services

Supply of spare parts and original components

Bianna After-Sales optimises the profit and loss account and the plant's operational efficiency

Increased availability and reliability:

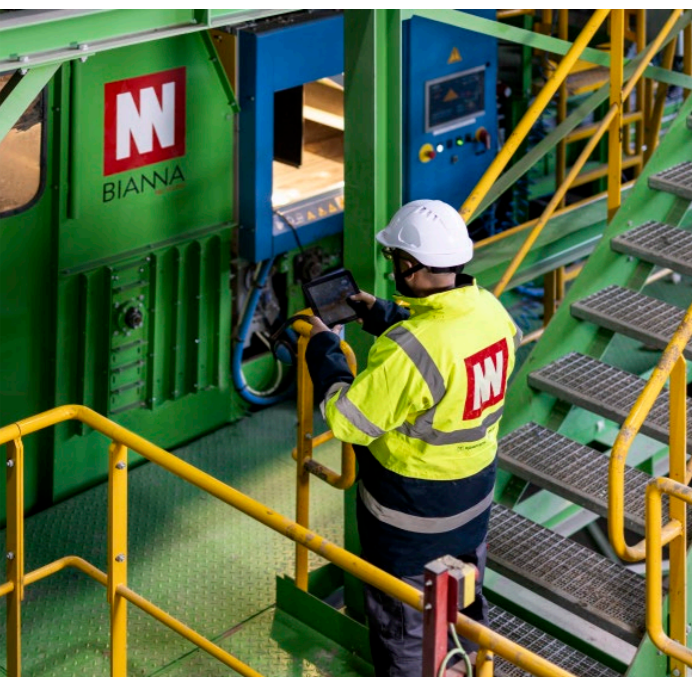

Our services ensure that your equipment is available 365 days a year and operating at full capacity, guaranteeing uninterrupted production.

Improved performance:

Through regular inspections and technical adjustments, we ensure that machinery operates in perfect condition, maintaining the expected levels of productivity.

Operational safety:

Professional maintenance ensures not only the functionality of the machine, but also worker safety and regulatory compliance.

BGW

GREEN WAYS

Our own facilities, shared knowledge

Bianna Green Ways (BGW) was founded with a clear mission: to be an operational partner to industry in its transition to a circular economy. We are the meeting place where technology moves beyond the drawing board to become a reality in action. Our laboratory is our clients' guarantee.

Bianna's applied knowledge division

Our operational facilities are not merely production centres; they serve as advanced testing centres, venues for specialised technical training and functional commercial showrooms. This initiative enables Bianna to align its vision of sustainability with practical reality, using our own plants to enhance the company's know-how and offer tangible guarantees to our customers in a real-world operational setting.

BGW is aimed at engineering firms, operators and technical decision-makers who need to validate technologies and gain practical knowledge of waste recovery solutions prior to their large-scale implementation.

Our services:

We put our infrastructure at the service of knowledge and technological validation through three key areas:

New Technologies Laboratory (R&D)

Operational technology showroom

Specialised technical training

Combining industrial expertise with innovative capabilities

Proven reliability:

We validate our technology by operating our own facilities, ensuring its efficiency under real-world conditions.

Industrial expertise:

Our know-how is backed by over three decades of experience and 86,500 m² of global infrastructure.

Empirical guarantees:

We turn theory into safe, turnkey projects, anticipating challenges directly from day-to-day operations.

BRS

BIANNA
RENTING SERVICES

Turn your waste into an asset, decarbonise your processes and safeguard your business model

We enable sustainable technology through flexible usage models: industrial leasing that transforms CAPEX into operational efficiency and guaranteed profitability.

We make Bianna technology more accessible

We are not a traditional financial institution; we act as an industrial-financial partner, enabling companies to access the necessary machinery, from mobile equipment to fixed plants, without having to make large upfront payments.

We cater both to specialist waste management operators seeking to defend their market share and to industries needing to decarbonise their processes and optimise their energy management.

We help our clients optimise their business models and the implementation of technology for the treatment, recovery and valorisation of waste through financial solutions that turn projects into profitable realities.

Our services:

At BRS, we offer ways of accessing technology tailored to the specific requirements of each industrial project:

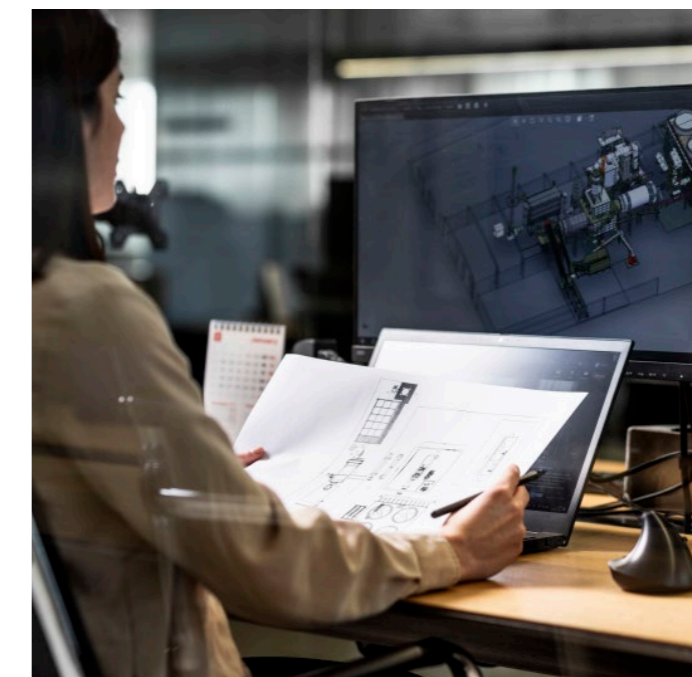

Technology leasing

Sale postponed

Advice on financing

The paradigm shift: From CAPEX to OPEX

Removing barriers:

Enables you to undertake immediate modernisation projects without waiting for large capital budgets to be approved.

Flexibility:

Adapt your production capacity to the actual duration of your contracts or concessions, avoiding the need to tie up capital in inflexible assets.

Speed of technology implementation:

If your strategy requires multiple technology investments, you can execute them simultaneously. We help clients balance CAPEX and OPEX on their balance sheet, enabling a more agile adoption of technology that is aligned with their business objectives.
